

A 8m Height Globe Sculpture Finished in June,2023

how we make it?

1. Firstly, prepare the arch tube sections for main globe

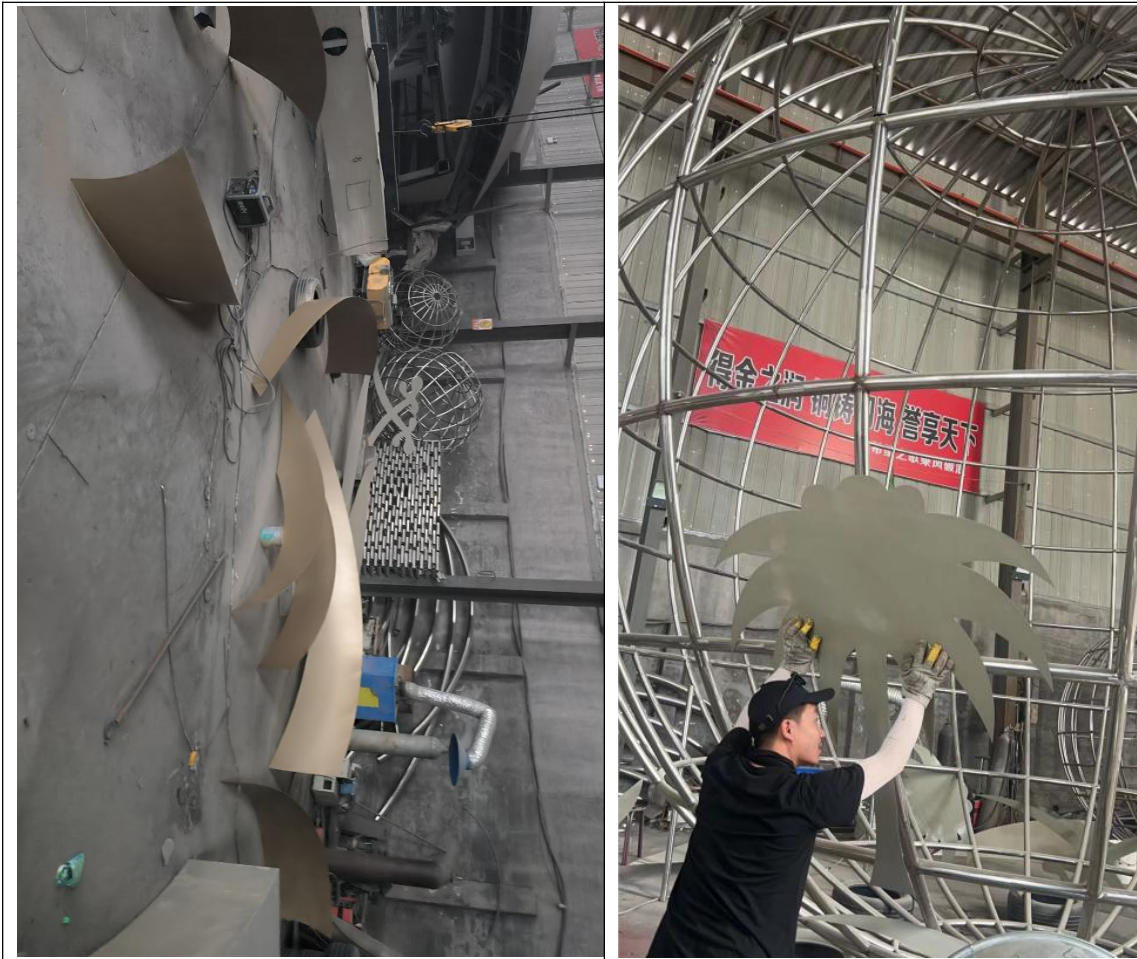

2. Join the sections in a full globe

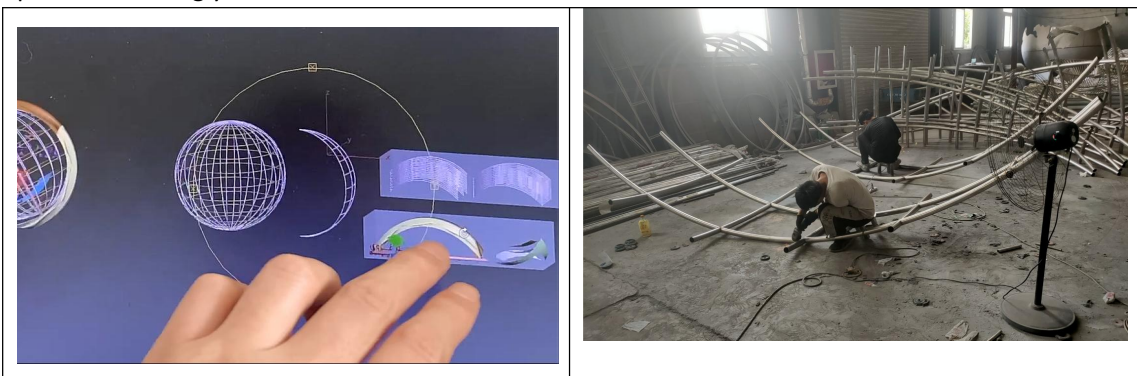

3. Make the arch

4. Prepare the accessories, include all patterns which attached on globe and test the arch match.

5. To make sure all parts could be loaded into containers, we discuss with client, simulate the container loading condition and finally decide to cut globe and big arch into different smaller size pieces accordingly.

6. Prove Color and Make Auto-type painting for surface

7. Make labels for different parts, which make it easy for joints during assemble process at site.

8. Packing and container loading
